

Sreekaran Reddy Ramasahayam

(913) 299-7216 | sreekaran.2021@gmail.com | linkedin.com/in/sreekaranreddy1704 | github.com/Sreekaran1704

Skills

Programming & Querying: SQL (joins, aggregations, window functions), Python (Pandas, NumPy), Advanced Excel
Data Analysis: EDA, Data Cleaning, Data Validation, Data Transformation, Data Integrity, Schema Validation
Statistical Analysis: Regression Analysis, Distribution Analysis, Hypothesis Testing, R (Statistical Analysis)
Data Handling: Data Restructuring, Data Standardization
Visualization & Reporting: Tableau, PowerBI, Plotly, Dashboards, Data Visualization, Data Storytelling
Tools: Git, AWS (EC2, S3)

Education

University of Missouri-Kansas City

Aug 2024 – May 2026

Master of Science in Computer Science - Data Science

GPA: 3.96

- Relevant Coursework: Data Science, Statistical Learning, Database Management Systems, Cloud Computing, Generative AI

Work Experience

Sree Nirman

May 2023 – Apr 2024

Data Analyst Intern (Analytics & ML)

Hyderabad, India

- Started with 50K+ records of inconsistent construction data then cleaned and structured it using SQL and Python (Pandas, NumPy) by performing schema validation, handling missing values and outliers, enabling accurate analysis of cost drivers and budget variances to improve project planning.
- So, to identify inefficiencies in project costs, conducted exploratory data analysis (EDA) across material, labor, and timelines, defining key KPIs such as cost variance and resource utilization uncovering patterns that improved reporting reliability by 30%.
- To support decision-making, translated analytical findings into interactive Tableau dashboards and reports which enabled data-driven project planning improving cost control and operational efficiency by 15%.
- Collaborated with engineering and operations stakeholders to validate insights and refine metrics, ensuring dashboards aligned with real-world project needs, which improved adoption of data-driven practices to address any cost overruns and inefficiencies.

Avanthi High School

Apr 2022 – Jan 2023

Data Analyst Intern

Warangal, India

- Started with 12K+ student financial records and 50k+ organization records, across hostel, academics, and sports, and analyzed them using Python (Pandas, NumPy) and Excel, identifying key spending patterns, budget variances, and cost inefficiencies affecting institutional expenses.
- Then led end-to-end data preprocessing and exploratory analysis by cleaning inconsistencies, handling missing values and structuring datasets, improving data accuracy by 30% and uncovering 10–15% potential cost savings in over-budget categories.
- To better track and explain financial performance, defined and monitored key KPIs such as department-wise expenditure, budget variance, and category-wise spending trends, enabling more informed budget planning and resource allocation decisions.
- To make these insights actionable, built interactive Tableau dashboards and delivered monthly financial reports, improving stakeholder visibility into spending trends and reducing reporting turnaround time by 20%.

Assistantship

University of Missouri-Kansas City

Aug 2025 – Present

Information Services Lab Assistant

Kansas City, MO

- Mentoring students on data analysis workflows with emphasis on data validation, reproducibility, and structured data handling.
- Review datasets and resolve inconsistencies to ensure reliability and consistency of analytical outputs.

Projects

Hospital Readmission Risk & Staffing Analytics | GitHub

Python, SQL, Statistical Analysis

- Worked with 100K+ hospital records to understand what drives readmissions by cleaning and analyzing data across admission, diagnoses, and discharge details to uncover meaningful patterns.
- Built weekly staffing insights by projecting patient follow-ups across specialties and intervention types, helping estimate workload and support better capacity planning.
- Explored statistical and predictive approaches for risk segmentation and created dashboards to clearly show readmission trends and expected staffing demand.
- Integrated LLMA-layer to generate concise summaries of analytical insights, bridging the gap between complex data outputs and actionable decision-making.

Vehicle Insurance Eligibility Prediction & MLOps Pipeline

Python, MLflow, DVC, AWS

- Built an end-to-end pipeline for insurance eligibility prediction, handling data ingestion, preprocessing, feature engineering, and model training on structured datasets.
- Deployed the model as a FastAPI service on AWS EC2 with CI/CD via GitHub Actions, ensuring reproducible experiments and scalable deployment.
