## Professional Summary

Data Science and Analytics professional skilled in SQL, Python, statistics, machine learning, Excel, Tableau, and Power BI, with hands-on experience transforming messy business data into clean datasets, KPI dashboards, statistical insights, and predictive models. Experienced in data cleaning, EDA, hypothesis testing, regression analysis, feature engineering, model evaluation, dashboard reporting, and stakeholder-ready insight delivery across construction, finance, healthcare, and AI-focused projects.

## Skills

**Programming & Querying:** SQL, Python, R, Pandas, NumPy, Advanced Excel

**Data Analysis & Statistics:** EDA, Data Cleaning, Data Validation, KPI Analysis, Trend Analysis, Variance Analysis, Hypothesis Testing, Distribution Analysis

**Machine Learning:** Regression, Classification, Feature Engineering, Model Evaluation, Hyperparameter Tuning, scikit-learn, XGBoost

**AI & LLM Evaluation:** Prompt Engineering, LLM Evaluation, LoRA/PEFT Fine-Tuning, Model Benchmarking

**Visualization & Reporting:** Tableau, Power BI, Matplotlib, Plotly, KPI Dashboards, Analytical Reporting, Data Storytelling

**MLOps & Tools:** MLflow, DVC, Docker, FastAPI, GitHub Actions, AWS EC2/S3/ECR, Git, Linux

## Work Experience

### Sree Nirman

May 2023 – Apr 2024

*Machine Learning Engineer Intern (Analytics & ML)*

*Hyderabad, India*

- Engineered a reusable analytics and ML dataset from 50K+ construction records by cleaning, normalizing, validating schemas, resolving missing values/outliers, and creating cost, labor, material, and timeline-based features.
- Designed KPI and feature logic for cost variance, labor productivity, resource utilization, and timeline deviation, connecting business performance reporting with predictive cost estimation workflows.
- Analyzed 4 core project dimensions through EDA, variance analysis, and statistical review to uncover cost drivers, budget drift, productivity gaps, and operational inefficiencies, improving reporting reliability by 30%.
- Evaluated regression cost-estimation models using RMSE,  $R^2$ , feature comparison, and MLflow tracking, then translated model outputs into Tableau dashboards and stakeholder-ready planning insights.

### Avanthi High School

Apr 2022 – Jan 2023

*Data Analyst Intern (Analytics & Machine Learning)*

*Warangal, India*

- Standardized financial analytics across 12K+ student records and 50K+ organizational expense records by cleaning, validating, and aggregating hostel, academic, sports, and administrative datasets.
- Applied variance analysis, trend analysis, distribution analysis, and hypothesis testing to detect spending anomalies, over-budget categories, and 10-15% potential cost-saving opportunities.
- Built monthly Excel reports and dashboard views for department-wise expenditure, budget variance, category-level spending, and financial performance, improving data accuracy by 30% and reducing reporting turnaround time by 20%.
- Developed ML and AI-assisted evaluation workflows, including an XGBoost-based student performance model and GPT-2 fine-tuning on 5K+ historical response samples, documenting preprocessing, evaluation logic, and review findings.

## Assistantship

### University of Missouri-Kansas City

Aug 2025 – Present

*Information Services Lab Assistant*

*Kansas City, MO*

- Mentored students on data analysis workflows, statistics, EDA, data validation, reproducibility, and structured data handling in a university lab environment.
- Reviewed and resolved reproducibility issues while maintaining lab system documentation to improve its accuracy and consistency.

## Education

### University of Missouri-Kansas City

Aug 2024 – May 2026

*Master of Science in Computer Science - Data Science*

*GPA: 3.96*

- Relevant Coursework: Data Science, Statistical Learning, Database Management Systems, Cloud Computing, Generative AI

## Projects

### Genre-Controlled Story Generation using LoRA

Python, PyTorch, Transformers, PEFT, QLoRA

- Fine-tuned Gemma 3-1B using LoRA/PEFT for genre-controlled story generation across fantasy, romance, and sci-fi prompts, building a reproducible instruction-tuning pipeline with structured data formatting and held-out evaluation.
- Evaluated base vs. fine-tuned outputs using validation loss, perplexity, coherence, genre fidelity, repetition, format following, and LLM-as-judge scoring to analyze model quality beyond surface-level accuracy.
- Conducted qualitative error analysis to identify weak endings, repetition, and genre drift, documenting where fine-tuning improved or weakened model behavior.
